

Diving Deeper Into HTML & CSS

Beyond the Basics

Module Content

Lists & Website Structure with Semantic Elements

Containers, Cascading, Inheritance & Specificity

The Box Model

Inheritance

(Selected) container rules apply to descendants

Cascading Style Sheets

Multiple rules can be applied to the same element

Specificity

More specific selector's rule wins over less specific selector

The CSS Box Model

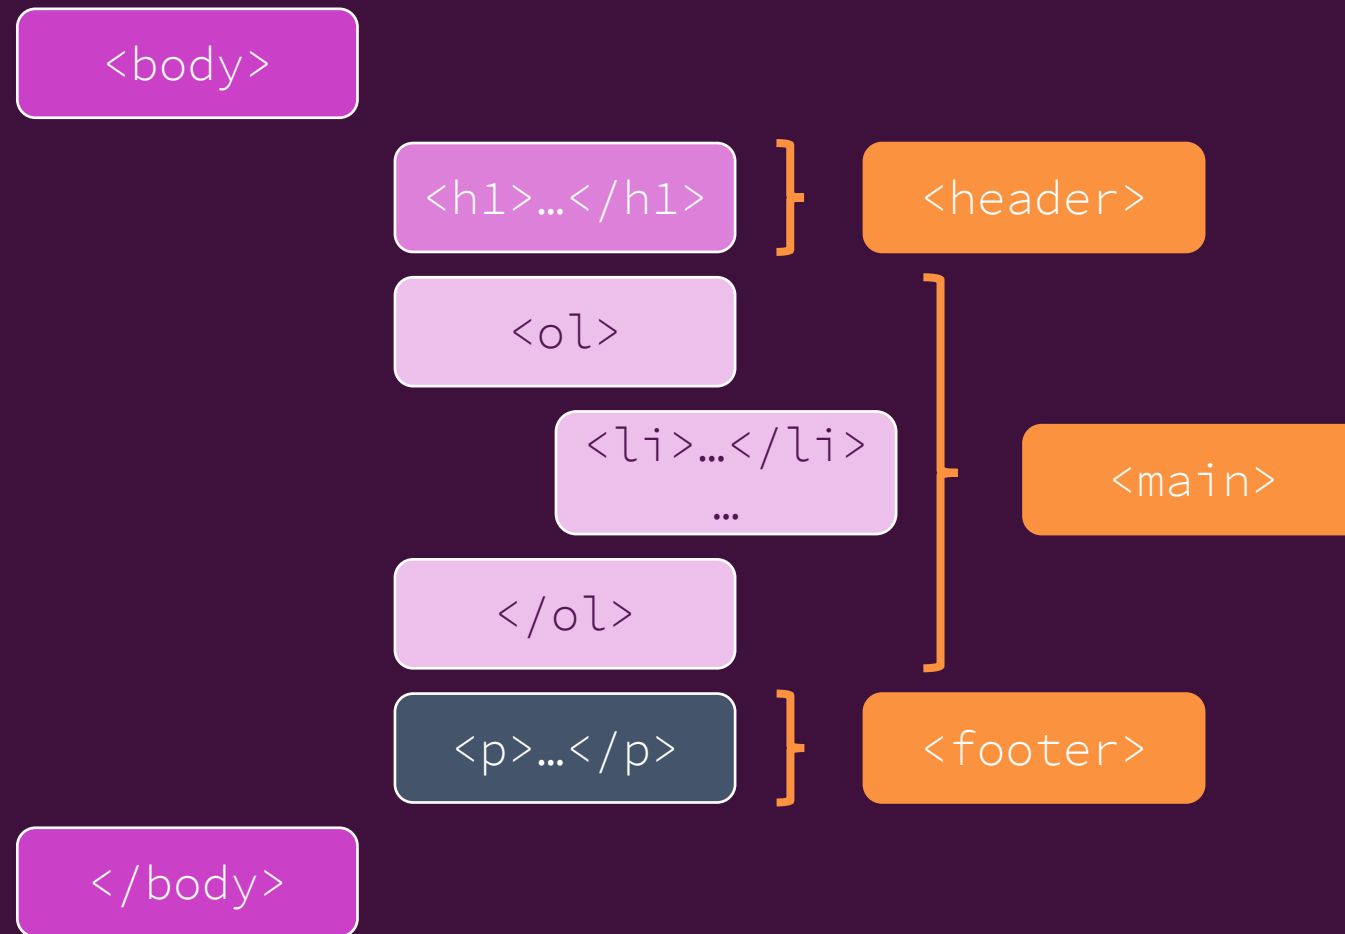

HTML
<p>The Box Model</p>

CSS

```
p {  
  padding: 2px 5px 2px 5px;  
  border: 2px dashed black;  
  margin: 8px 6px;  
  margin: 8px  
}
```

Adding Structure to a Webpage

Selectors & Combinators

Selectors

Type

elementname

ID

#id

Group

elementname,
elementname

Class

.class

Combinators

Descendant

li p

All p with li as
ancestor

Child

h2 > p

Only p which are
direct children of h2

Block (Level) Elements vs Inline Elements

`<p>This is a block element</p>`

`<p>This`

`<a>link is an inline element`

`nested into a block element</p>`

Block

Inline

New line

Full width

Common Inline Elements

`<a>`

Link to other website/page of current website

`<button>`

Clickable button to submit forms

``

Embed image into HTML page

``

Non-semantic inline container to mark-up text
